

GRD Error

Posted by deanstacy - 2009/03/06 20:20

I am still running AGWA 1.5 and have had no problems in the past, however I am trying to run another model and when I try and import the DEM I get the following error.

GRD ERROR -Syntax error at or near symbol))

Any help would be greatly appreciated.

Thanks

Hi,

Can you give us some more information so we can figure out your problem:

Which model are you trying to run?

How are you importing the DEM? What is the origin of the DEM?

Thanks,
Lainie

Thank you very much for your response.

I have seemed to fix it (somehow) by moving the DEM to the directory of the project I was working on. I usually try and keep all of my geodata in a central location on my C:/drive for organization. When it was there I was getting the error, then decided to move it and it worked.

I was trying to run KINEROS. The DEM I get from the Utah Automated Geospatial Reference Center (AGRC). I try and import it by the following;

File, import, then select USGS DEM etc...like I said after I moved it, things seemed to be fine.

Does anyone have any information on this as it relates to the location of files you are trying to bring in?

Thanks again!

Dean
